

MaxTune-SD_TSD_Kapitel-6.3_v2.1 – Technical System Documentation

Learning Outcome Licensing and Export Constraints

Version: 2.1 Effective from: 25.04.2025 Status: 100/100 – Approved Note:
Compatibility with Max systems is based on documented interfaces, not fixed version bindings.

6.3 Learning Outcome Licensing and Export Constraints

MaxTune enforces licensing and legal framing on all learning outcomes. No result can be exported, reused, or deployed unless it adheres to stakeholder-defined and MaxReg-verified constraints.

Licensing layers include:

- open, limited, or closed usage rights
- attribution, non-commercial, or share-alike clauses
- temporal or jurisdictional boundaries
- compliance with TBYD licensing principles

Export constraints are enforced via:

- metadata signatures
- policy-mapped deployment wrappers
- audit-readable export registries

This ensures that every output from MaxTune is more than a technical object—it is a licensed, governed, and responsible knowledge artifact.
