

MaxTune-SD_TSD_Kapitel-6.1_v2.1 – Technical System Documentation

Output Channels and Stakeholder-Controlled Export Logic

Version: 2.1 Effective from: 25.04.2025 Status: 100/100 – Approved Note:
Compatibility with Max systems is based on documented interfaces, not fixed version bindings.

6.1 Output Channels and Stakeholder-Controlled Export Logic

MaxTune's outputs are never automatically deployed or externally published. All result exports are governed by stakeholder-controlled logic that defines:

- what may be exported
- in what format
- under what licensing or compliance conditions

Output channels are:

- cryptographically signed
- policy-verified at runtime
- tracked in the audit registry

Export logic includes:

- selective redaction capabilities
- stakeholder signature requirements
- provenance and reproducibility markers
- expiration policies and revocation rights

This ensures that MaxTune's outputs—whether model weights, reason graphs, or evaluation summaries—are never detached from system oversight, stakeholder intention, and legal conformity.
